## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-3, 5-8, 10, 11, 33, and 34, are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al (US 2002/0145773).

For claims 1 and 8, Tanaka et al (Tanaka hereinafter) show a hologram recording apparatus and method comprising:

an illumination lens operable to focus a reference beam;

a beam splitter (13) optically coupled to the illumination lens by the reference beam; and a reference mirror (45) located at a waist of the reference beam.

Although Tanaka may not <u>expressly</u> state the functional use of the elements, such as the use of word "operable", a recitation of the intended use of the claimed invention must result in a <u>structural difference</u> between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. As presently claimed, there is no structural difference.

With regards to the limitation "to eliminate the need for a reference objective on a reference arm," that limitation does not further define the <u>structure</u> of the holography system.

In addition the <u>intention</u> of using a reference mirror to eliminate the need for a reference objective does not further define the <u>structure</u> of the system. Tanaka shows a structure of an illumination lens, a beam splitter, and a reference mirror located at a waist of the reference beam.

With regards to the method claim 8, "eliminating the need for..." only states the <u>purpose</u> or the <u>capability</u> of the reference mirror which is not a <u>step</u>. Therefore, there is no difference to the <u>steps</u> of the method claim. Tanaka shows the step of focusing a reference beam with an illumination lens, the step of transmitting at least a portion of the reference beam though a beam splitter, and the step of reflecting the portion of the reference beam.

With regards to claim 2, Tanaka only shows a schematic drawing of a beamsplitter and does not expressly state to use a cube beam splitter. Official Notice is taken that cube beam splitters are well known in the art and at the time of the invention one of ordinary skill in the art would have used a cube beam splitter since a cube beam splitter is notoriously well known for splitting beams.

With regards to claim 3, Tanaka shows a ¼ wave plate (paragraph [0101].

With regards to claim 5, Tanaka shows the reference mirror comprises a flat mirror (45).

With regards to claims 6 and 11, Tanaka shows the reference mirror operable to maintain optical symmetry of a reference arm and a target arm.

Application/Control Number: 10/661,175

Art Unit: 2886

With regards to claims 7 and 10, Tanaka shows the reference mirror operable to form a first wavefront substantially similar to a second wavefront formed by the reference objective.

(paragraph [0059])

Page 4

With respect to claim 33, the claim does not further limit claim 8 drawn to a method by reciting a step or manipulatively further defining a previously recited step. The claim merely recites a capability ("operable to") of the reference mirror, and thus Tanaka meets the limitation of claim 33.

With respect to claim 34, the claim does not further limit claim 8, which is drawn to a method, by reciting a <u>step</u> or manipulatively further defining a previously recited step. The claim merely recites the structure of the reference mirror, and thus Tanaka meets the limitation of claim 34.

3. Claims 4 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka as applied to claims 1 and 8 above, and further in view of Zgonik (US 6,781,725).

Zgonik shows confocal holographic optical storage having reference mirror at the waist of the reference beam wherein the laser beam (an thus the reference beam too) is a Gaussian beam (column 4, lines 36+). At the time of the invention, one of ordinary skill in the art would have used a laser source emitting a Gaussian beam for the properties such as least dilation by refraction.

## Response to Arguments

In view of the amendment to claims 1 and 8, the rejection under U.S.C. 112, second paragraph is withdrawn.

In response to applicant's argument that "eliminating the need for..." distinguishes from Tanaka, a recitation of the "eliminating the need for" is reciting the purpose, intended use, or the capability of the reference mirror. For claim 1, which is drawn to structure, there is no structural <u>difference</u> between the claimed invention and the prior art. There must be a structural difference in order to patentably distinguish the claimed invention from the prior art. Similarly, claim 8, which is drawn to a method, there is no difference to the method steps.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew Hwa S. Lee whose telephone number is 571-272-2419. The examiner can normally be reached on Tue-Fr.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tarifur R. Chowdhury can be reached on 571-272-2800. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
